Dynamic Digital Technologies

Canada's leading supplier of flat panel displays and projection systems.

Distributed locally by:

The Digital Video revolution is here!

Digital Projectors and screens for the basement!
Plasma Displays for the family room or bedroom!
LCD Displays for the kitchen, den or bathroom!

The Digital Home Guide - Winter 2004

Dynamic Digital Technologies has been supplying front projectors, plasma displays and LCD TV's for over 10 years; long before any of the large format retailers. Together with our national network of authorized resellers and custom installation dealers, we provide the best combination of design expertise, product knowledge, installation, and after sales service. Our products are the best in their class, and our prices are guaranteed to be competitive.

BENQ Home Theatre Projectors

What makes a perfect home theatre projector? Start with the HD2 Mustang DLP optical engine utilizing a six-segment colour wheel, Silicon Image SI504 line doubling, and 3:2 pull down for film material. With its multitude of inputs you can connect a HDTV satellite system, and a progressive DVD player, and operate it from a control system. True HDTV is delivered using a 1280 x 720p pixel grid. The

Includes serial control and screen trigger.

The NEC HT1000 Entertainment Projector

NEC

The ShowCase Series HT1000 is NEC's first projector optimized for residential entertainment users. The HT is geared to deliver the best in class display for HDTV, DVDs, videos, home movies, graphics and games. The HT1000 delivers an industry first 3000:1 contrast ratio in a 7-pound product. With uncompromising image display, extraordinary picture quality and unsurpassed compatibility, the HT1000 is the entertainment projector of choice that will knock your socks off! Optimum screen size is 100-200" with a 16:9 or 4:3 aspect ratio. Two year warranty.

"The HT1000's fine blacks and good shadow detail produced convincing images on material that makes many digital projectors scream Uncle! I was more than excited by the performance of the NEC HT1000. To my eyes, it produced very near the performance of the best 16:9, HD2-chipped DLP projectors at 50% of the price. It's a whale of a projector in a guppy-sized package."

(July/August 2003 Stereophile Guide to Home Theater.....Tom Norton.....July 17, 2003)

NEC HT-1000

- ▲ **\$399** ● Ceiling Mount

A "cinema quality" home theatre is now an affordable reality for most consumers, thanks to advancements in DLP and LCD projectors, which can now produce wide aspect images as good as those in your local movie theatres. This is attributed to media such as DVD and High Definition Television, which provide true to life images! This year, enjoy quality time together with family and friends in your very own home theatre!!

The Piano Avanti HT3200 Home Theatre Projector (DLP-HD1)

The Piano Avanti projector has been named the "best home theatre projector" by all leading publications in the video industry. Its unique combinations of home theatre specific features combined with an ultra competitive price point make it the perfect choice for your home or apartment.

At the heart of this projector is the unique dual mode (16:9 and 4:3) DLP optical engine supporting both wide format DVD movies and standard 4:3 television broadcasts in their native resolutions. It also incorporates a superb video line doubler, HDTV scaler, and 3:2 pull down film support. Finally the Piano can never be heard as it operates at a whisper quiet 34db noise level. It weighs a mere 4.4lbs so you can move it around easily or take it with you. The optimum screen size is 90-120" with a 16:9 or 4:3 aspect ratio. Two year warranty.

Sanyo PLV-Z1 LCD Projector

The Sanyo PLVZ1 and PLVZ2 projectors incorporate a revolutionary 16:9 LCD panel that delivers exceptional imagery. It is also equipped with an internal video scaler for smooth, film-like, video quality. This model is ideally suited for small to medium size rooms that are capable of black out conditions. Super quiet operation ensures that you hear the movie instead of the projector. The revolutionary low price point makes the PLVZ1 affordable for all! Optimum screen size is 80-120 " diagonal with a 16:9 aspect ratio.

A multi-purpose projector can now be purchased for as little as \$1,499. Typically these projectors offer features that perform many different tasks and they produce a reasonable video image for home theatre as well. Use a multipurpose projector in the office for presentations, in a restaurant/bar/retail store for large screen imagery, or in a recreation environment for video games and sporting events.

U2-1200 / U2-817 Projector

The new U2-1200 DDR DLP projectors delivers 2000 lumens output with an impressive 1500:1 contrast ratio, so you can keep the lights on in your room. It has a unique slim line design that adds elegance to any room. Also its new lamp technology allows you to enjoy up to 4000 hours of use before replacing a lamp. The optimum screen size is 120"-200". The companion U2-817 offers similar features and is suitable for bars, nightclubs, and games rooms.

- ▲ \$2,399 ● 159" diagonal (78"x139")
- ▲ \$299 ● Keystone Black Frame

Front Projection: 80"-200" viewing area

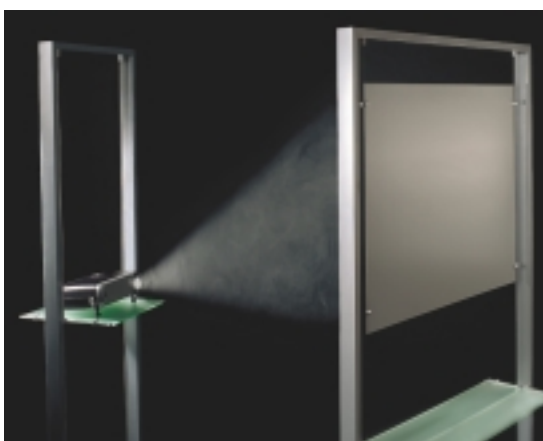

The typical front projection theatre will have theatre style seating, raised in the second row, and speakers surrounding the audience. The projector unit will be ceiling mounted as shown.

reversa Projector Screen Innovation Rear Projection

Taking screens out of the DARK AGES

Reversa's unique ability to show images in total daylight means that it is perfect for use in your backyard or for outdoor parties. Combine it with a short throw lens projector and create a home theatre in any unused corner of a room regardless of ambient light.

Reversa ECLIPSE II / ECLIPSE / REVERSA

- Wall & ceiling mounted screen
- High video gain surface up to 5.0
- "Lights on" visible & sunlight visible
- Weighted ceiling hanger bars included
- Vertical extrusion bars included
- Optional Floor Stands

- ▲ \$1,499 ● 50" diagonal
- ▲ \$1,599 ● 67" diagonal
- ▲ \$1,799 ● 84" diagonal
- ▲ \$1,899 ● 100" diagonal
- ▲ \$1,999 ● 120" diagonal
- ▲ \$2,499 ● 142" diagonal

Large format projection TVs, based on 3 gun CRT technology are now being phased out and replaced with new digital systems based on "LCD" and "DLP" projection engines. Due to the small size of the internal optical assembly, the overall cabinet depths are about half that of the older systems. This new generation of digital displays are capable of high-resolution imagery rivaling plasma displays for about half the cost!

Rear Projection LCD / DLP TV

The digital television revolution is here with new sets now available in 43", 50" and 60" diagonal viewing sizes. Their native 16:9 wide screen aspect ratios are perfectly suited for wide screen DVD movies and HDTV broadcasts. Standard video and TV broadcasts are automatically converted to wide screen or can be viewed in 4:3 formats without any negative effect on the screen. These monitors can display up to "Wide XGA" computer graphics from your PC, game box or Internet source. You can even split the screen with one half being your pc and the other your video player or TV. PC audio and Video audio are both supported through it's integrated stereo speaker systems!

- ▲ **\$1,099** ▼ Floor Stand KDD60L

There are a few key features to note when comparing rear projection systems and plasma displays. An LCD/DLP based rear projection system can offer a big "price" advantage over a 50 or 60" plasma, but not for a 42". Like a plasma a rear projection system can support HDTV and computer inputs, but has a replacement lamp rated for 7,000 to 10,000 hours. A plasma display also has a wider viewing angle and much better daylight visibility and can even be hung on the wall. Ergonomically speaking a wall hung plasma display looks less cluttered than a rear projection system.

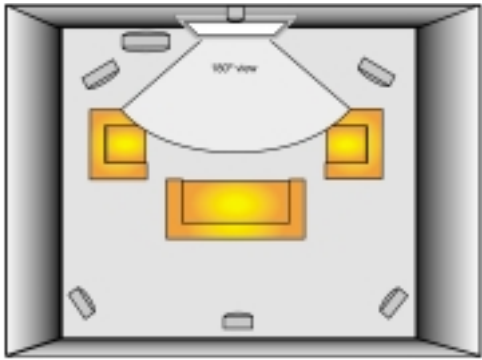

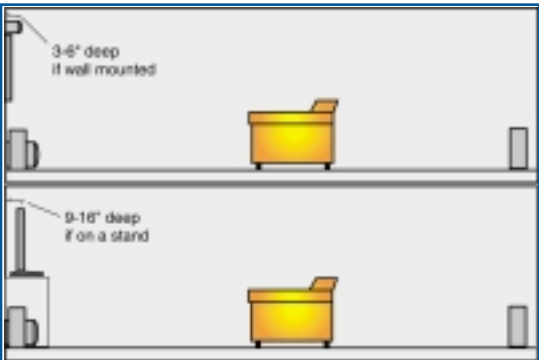

Rear Projection LCD - DLP TV: 43" - 60" viewing area

The new generation of LCD/DLP tv fits where others don't. The secret to this engineering marvel is a compact digital projector engine powered by a single, postage stamp sized DLP chip or LCD display.

Plasma / LCD Display TV: 30" - 60" viewing area

The future of TV has arrived in the form of Plasma or LCD flat panel TV. Stunning big picture quality executed in an amazingly thin and light form factor is achieved with this new technology.

What dreams shape up to be? Picture a super size, wall-mounted slim elegant HDTV monitor providing numerous hours of pure HDTV visual enjoyment and you're looking at the LG 60" Plasma Display Panel. This stylish and affordable flat panel can reproduce the theatre ambience smack down the middle of your family room. It is the largest plasma

display on the market, yet it offers the most attractive price point in its class. Faroudja scaling offers crisp clear video images. This PDP can be wall mounted, sit on a table with its' optional desk stand, or sit on the floor with the optional floor stand.

LG 60" Plasma TV

Flat panel displays and televisions are expected to be the standard visual monitor in luxury custom homes and condominiums in 2003/4. More and more people are eliminating clutter and incorporating sleek, slim and sexy plasma televisions into their homes. Fifty and 60-inch models are suitable for the main floor family room, while 32" and 42" models are suited for living rooms, above a fireplace, or on a kitchen wall. The possibilities are unlimited!

Hitachi Plasma Displays

A leader in the flat panel market and a manufacturer of plasma glass, Hitachi displays are perfectly suited to high resolution video imagery and computer graphics. Both models offer true HDTV compatibility. Optional TV tuner card, speakers and desktop stand available.

Prices have been dropping and so most displays are now within the reach of most people's budgets. This year, Canadian broadcasters have begun offering High Definition channels featuring your favourite movies, sports and sitcoms in stunningly realistic HTDV quality (up to 15 channels). HDTV offers 1080i lines of resolution vs. NTSC, which offers only 480i lines. Once you view HDTV you won't go back!

NEC PlasmaSync Displays

No other family of displays has won as many awards as PlasmaSync by NEC. Simply the best picture quality available today. Stunning colours, rich contrast and smooth video make NEC the preferred choice among the most demanding users.

Outfit your house with LCD based digital video. LCD displays with a 20" to 30" diagonal size are ideal for the bedroom, den or kitchen wall; while 15" to 17" displays are perfectly suited for the kitchen counter, washroom en-suite, or child's room. Whether you require an outlet connection for TV or DSL, wall mounting, or just an extra power outlet, our expert custom installers can equip any environment - new or old.

New Digital LCD Video Displays

The new Digital 30WLCD and Digital 22WLCD incorporate the latest LCD flat panel technology with high contrast ratios, excellent viewing angles and native 16:9 aspect ratios. Both models have a built in cable TV tuner and are fully HDTV compatible. The elegant styling complements any room décor. Unique picture in picture function, and split screen allow for dual input viewing. Speakers, table stand and/or wall bracket are included.

Digital 30WLCD

BenQ 15" LCD TV

Flat Panel displays can be mounted where they have never been seen before! Position them near a window, under pot lights or other high-glare locations and you won't believe how bright they are. LCD now offers wide horizontal and vertical viewing angles so you can position the display at virtually any angle and be assured of a clear picture. LCD also offers approximately 60,000 viewing hours, which is more than eight viewing hours a day for 20 years - approximately two times longer than most CRT TV's.

Sharp LCD TV's Displays

Versatile. Beautiful. Super Size! Crystal clear picture quality in a surprisingly thin, sleek design that you can place virtually anywhere. Hang it on a wall, put it near windows, keep it out in the open. Its stylish design will make you rethink where television can go. It'll change the way you see TV.

SHARP

NEC/MITSUBISHI LCD 4000 Video Display

The 30" NEC LCD3000, and 40" NEC LCD4000 are the worlds largest LCD displays, providing a high-performance option for your large screen viewing requirements, and a great alternative to plasma displays. Featuring 1280 x 768 resolution, remarkable brightness, XtraView® wide-angle viewing and no permanent phosphor image burn-in. NEC has a long and proven history with LCD displays and is currently a market leader in the large size LCD market.

A video processor will scale, line double/triple and re-size any input video signal to match the native resolution and aspect ratio of a display or projector. This effectively creates a perfectly sized and distortion-free image. In addition, it allows input cables from 10 different players/boxes and outputs to a single cable for a display or projector. This eliminates the need for complex installations and expensive wiring.

Focus Pro Video Processors

Focus, the company known for its obsession with video image quality, now brings you the Centerstage professional video processor; high-end performance without the high-end price.

While television, tapes and other interlaced sources look good on displays designed for their resolution, artifacts result when these sources are incorrectly converted for higher resolution displays. Scaling circuitry found in projectors or plasmas is typically only optimized for computer video sources. Centrestage functions as a

resolution multiplier and upscales video to full native resolutions required by LCD, DLP, or D-ILA projectors and other high-resolution plasma displays.

Focus CENTERSTAGE CS-1 SCALER

▲ **\$2,999**

- Line doubles, triples, quadruples
- 8 video inputs
- DVI, RGB, Composite outputs
- HDTV and Computer Pass through
- Scales up to SXGA and HDTV

Understanding all the new high definition and DVD video formats can be confusing. Below you will find a visual description of how these formats appear on both standard 4:3 televisions and new wide screen 16:9 televisions. As well we have tabled the type of display that you would use in a particular room in your house. We hope this helps to simplify the decision making process.

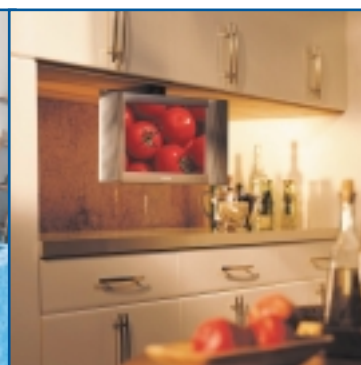

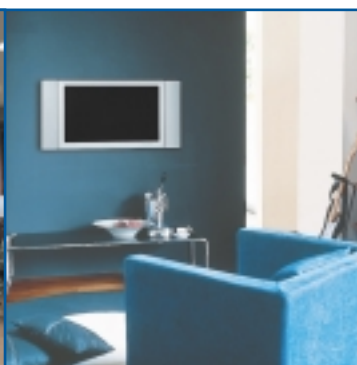

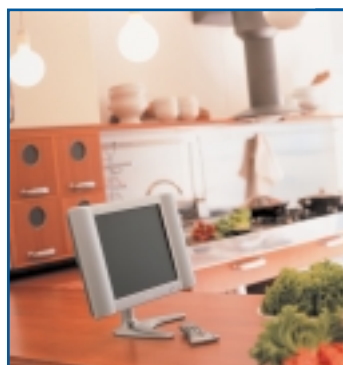

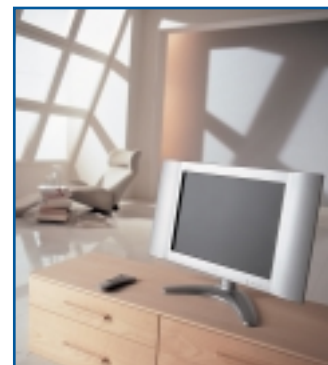

How your wide screen movies would look on your Display/TV.

How your full screen movies will look on your Display/TV.

DVD Movie can be expanded to fill screen.
DTV signal cannot be expanded to fill screen.

Guide to selecting displays for each type of room.
